## ANTI-BOVINE BHV-4 MONOCLONAL ANTIBODY LABELLED WITH FLUORESCEIN ISOTHIOCYANATE (BIO 286)

(Reagent for direct immunofluorescence)

**REAGENT FOR DETECTION OF BOVINE HERPES VIRUS 4 (BHV-4) ON TISSUE SECTION OR CELL CULTURE**

### I - PROCEDURE

Fix the cell preparation (cell cultures or tissue sections) for 15 minutes at 21°C +/- 3°C with one of the following fixators :

- Acetone solution (9 volumes of acetone and 1 volume of water).
- Acetone (1 V) + Ethanol (1 V)
- Ethanol
- Isopropanol

Rince with PBS.

Dilute the conjugate twentyfold with a PBS-Evans blue solution made up according to the following formula:

#### PBS - Blue Evans

NaCl:	8 gr
KH <sub>2</sub> PO <sub>4</sub> :	0.2 gr
KCl:	0.2 gr
Na <sub>2</sub> HPO <sub>4</sub> · 2H <sub>2</sub> O:	1.15 gr
Blue Evans:	0.01 gr
NaN <sub>3</sub> :	0.1 gr
H <sub>2</sub> O	1 L

Incubate the sample with the fluorescein-labelled conjugate for 1 hour at 21°C +/- 3°C. At the end of this incubation period rinse the cell preparation with a PBS solution. Dry the cell preparation, then add the mounting medium prepared as follows:

Bio-X Diagnostics S.A.- 38 Rue de la Calestienne (PAE) – 5580 Rochefort – Belgique  
Tél : 0032(0)84.32.23.77 - Fax : 0032(0)84.31.52.63 E-mail : a.ginter@biiox.com (22/06/2016)

Mounting medium

Glycerol	9 volumes
PBS	1 volume

Examine the cell preparation under a microscope equipped for detecting fluorescence.

### II - STORING THE CONJUGATE

The conjugate must be stored between +2°C and +8°C. It must never be frozen. It will keep at least 1 year between +2°C and +8°C.
